DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it does not commence on a separate sheet. Correction is required. See MPEP § 608.01(b).

Claim Objections

1. Claims 5, 6, and 8-15 are objected to because no method steps are positively recited in the claims. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Rothman (3,799,701).

Rothman discloses an embedding element (Figs. 1-3) comprising an elongated element 14, the elongated element 14 has a first end portion and a second end portion, and is provided with fastening means 20 in its first end portion; wherein in between its two end portions the embedding element is provided with a first longitudinal lateral face (lower face of element 14 in Fig. 2) extending substantially concavely in a cross-sectional view perpendicular to the longitudinal axis of the embedding element, and with a second longitudinal lateral face (upper

face of element 14 in Fig. 2) facing opposite the first lateral face and extending substantially correspondingly convexly in a cross-sectional view perpendicular to the longitudinal axis;

wherein the embedding element tapers in the direction towards the second end portion (Fig. 1);

wherein the embedding element is further provided with an upper face (left surface of element 14 in Fig. 2) and a lower face (right surface of element 14 in Fig. 2) interconnecting the concave lateral face and the convex lateral face, the upper face and the lower face extending gradually convergently in relation to each other towards the second end portion of the embedding element to provide a wedge-shaped embedding element (Fig. 1).

Prior Art

The prior art made of record but not relied upon is considered pertinent to applicant's disclosure and consists of 1 patent.

Heymann (2,984,453) is cited to show an embedding element for a rotor blade.

Allowable Subject Matter

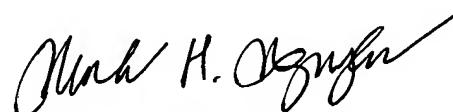

4. Claims 4 and 6-12 would be allowable if rewritten to overcome the objections set forth in the "Claim Objections" section of this Office action and to include all of the limitations of the base claim and any intervening claims.
